

# RAVE – Vertex Finder

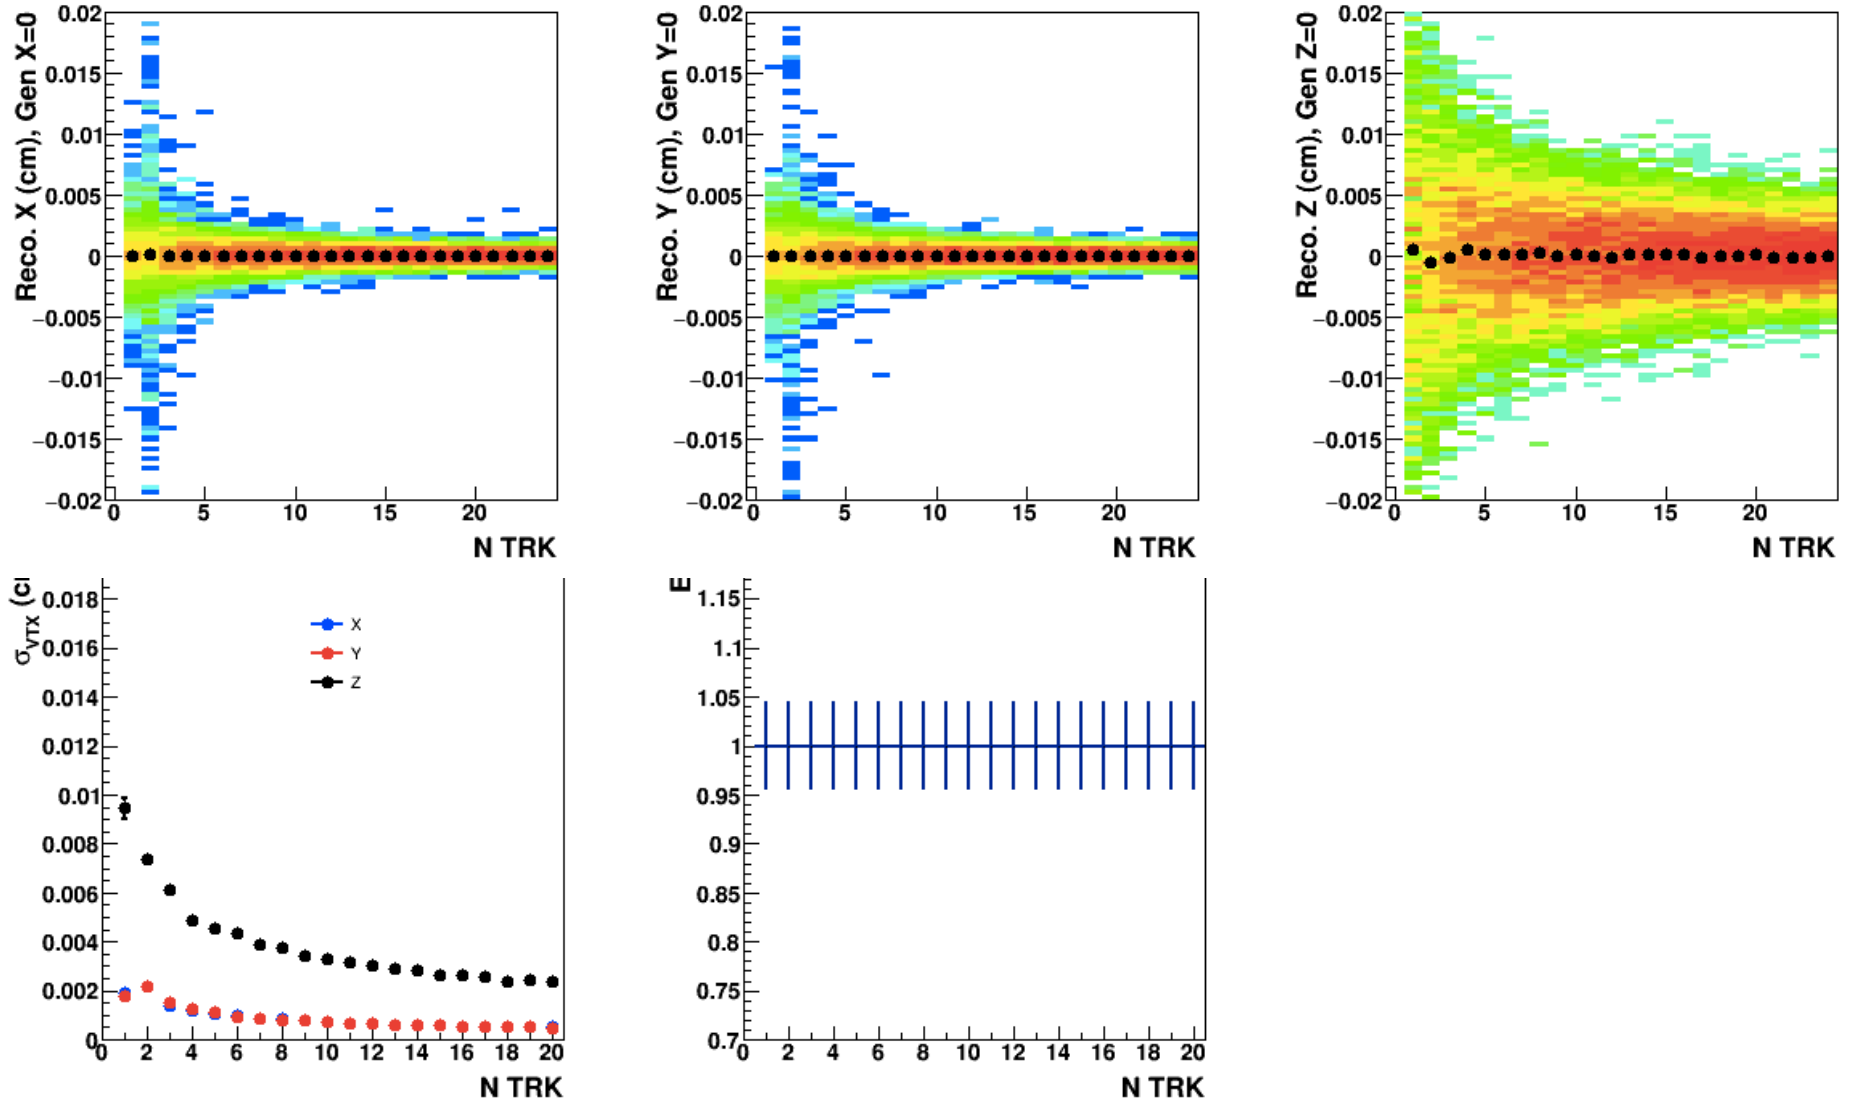

Sanghoon Lim

- Rave
  - Reconstruction in an Abstract, Versatile Environment
  - vertex reconstruction toolkit with input of reconstructed track
  - developed for CMS
- GFRave
  - Interface between Genfit and Rave
  - Reconstructed tracks from Genfit can be used directly

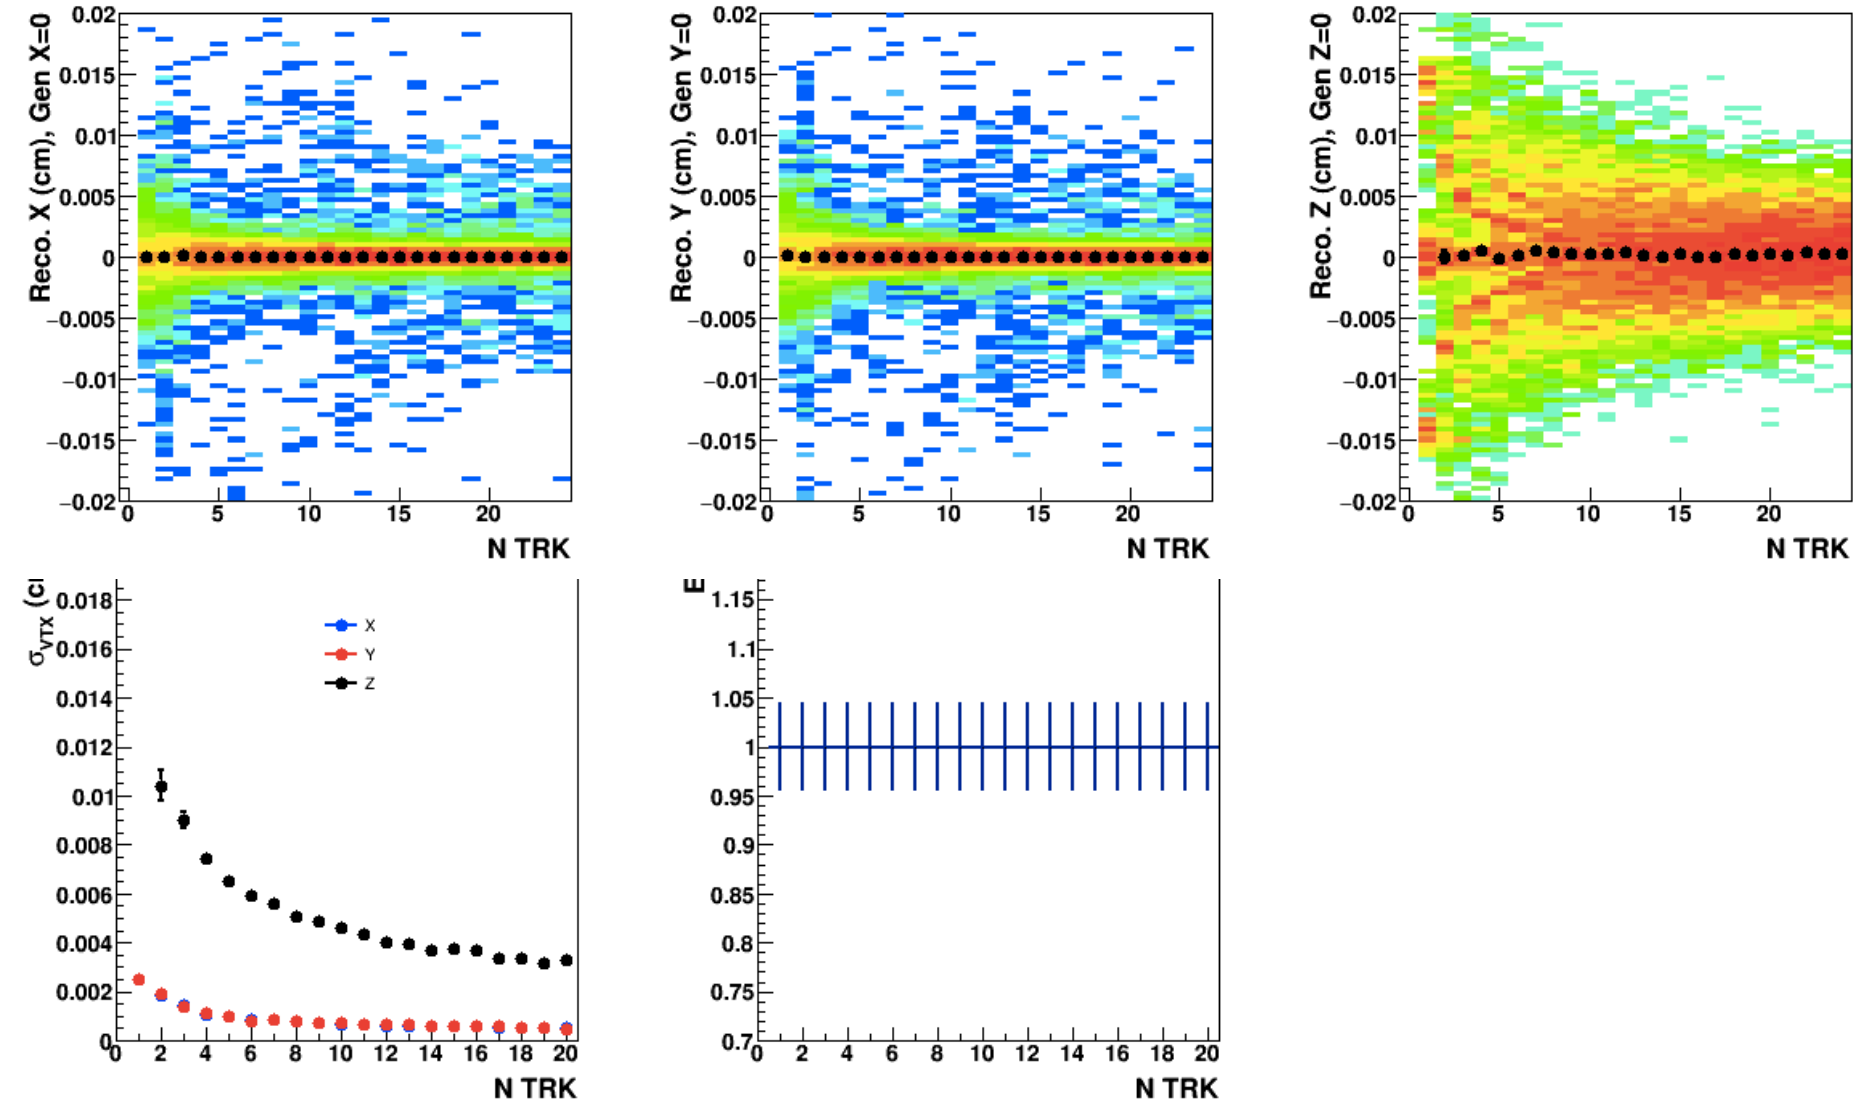

### Example flow

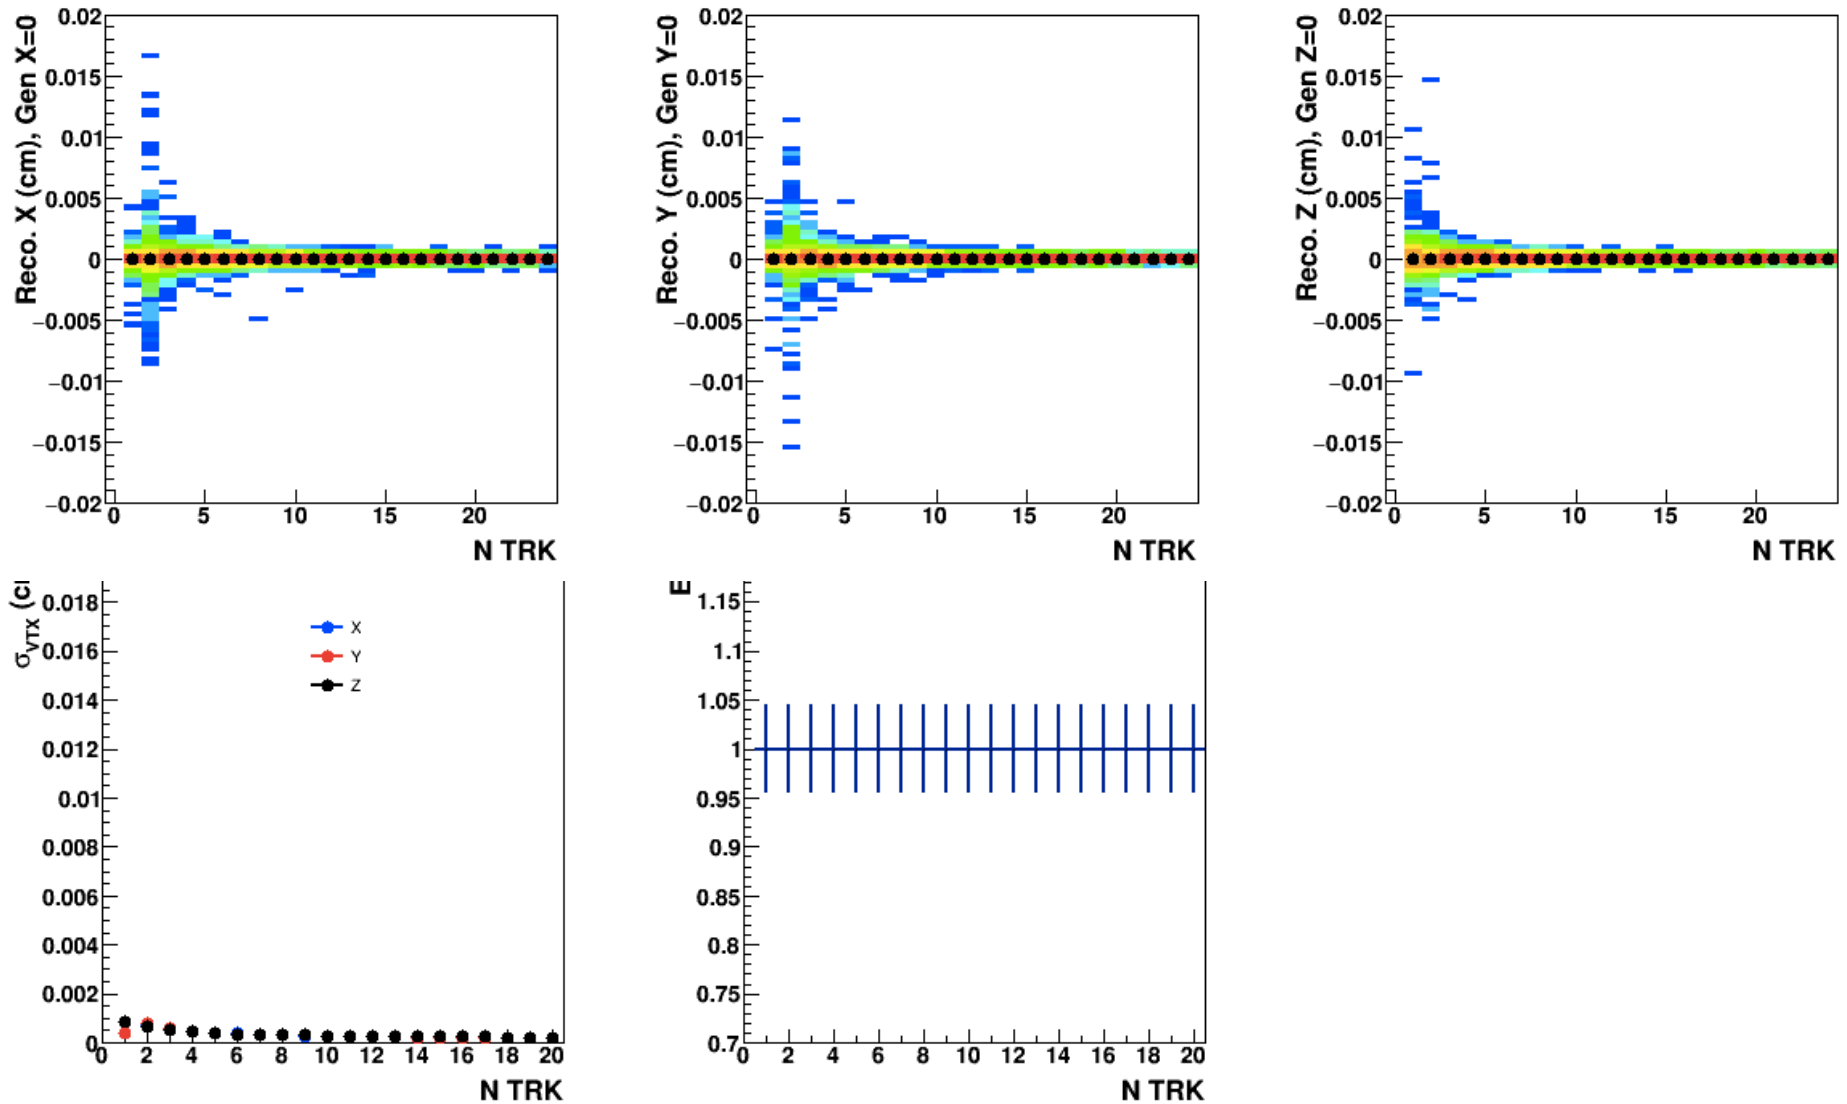

- Handling tracks
  - **Linear Vertex Fitter**: simple line
  - **Kalman Vertex Fitter**: parameters from Kalman filter
- Handling outlying tracks
  - **Trimming Vertex Fitter**  
simply reject outlying tracks
  - **Adaptive Vertex Fitter**  
use a weight function to de-weight outlying tracks
- Multiple vertex finding
  - **Multi Vertex Fitter**  
very similar to AdaptiveVertexFitter but able to reconstruct multiple vertices

- random generation of muon at (0,0,0)
  - $1 < p_T < 40$  GeV/c (flat),  $-0.5 < \eta < 0.5$  (flat)

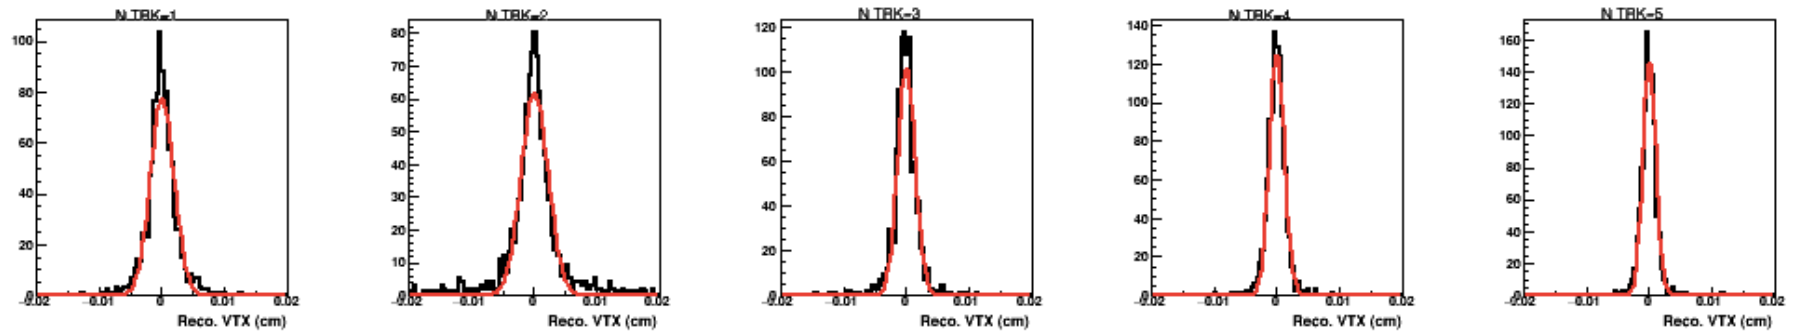

- random generation of muon at (0,0,0)
  - $1 < p_T < 40$  GeV/c (flat),  $-0.5 < \eta < 0.5$  (flat)

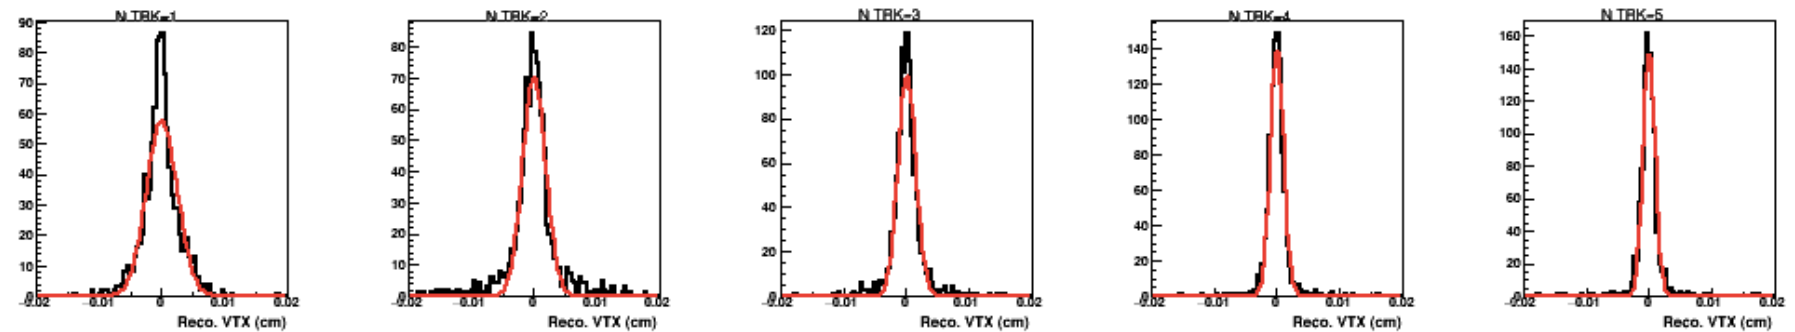

- random generation of muon at (0,0,0)
  - $1 < p_T < 40$  GeV/c (flat),  $-0.5 < \eta < 0.5$  (flat)

# Comparison of $x_{\text{VTX}}$ ( $N_{\text{track}}$ 1-5)

# Vertex resolution of 3 configurations

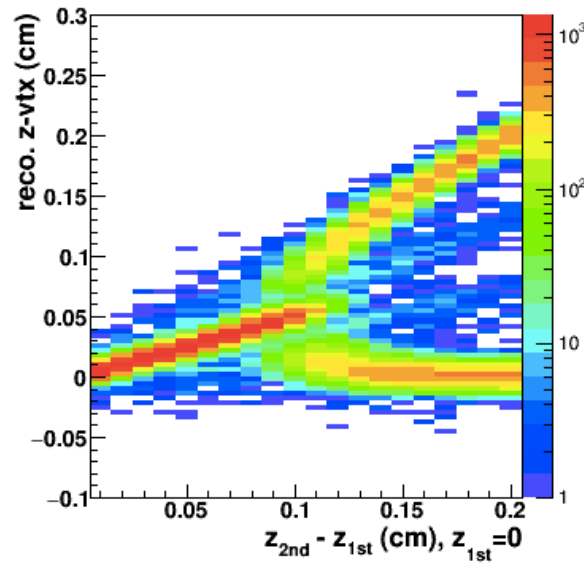

# Multiple vertex reconstruction

- generate **5 tracks** at each  $z$  position of  $z=0$  and  $z=z_{2nd}$  cm
- scan  $z_{2nd}$  from 0.01 cm to 0.20 cm with 0.01 cm interval (2k try for each  $z_{2nd}$ )

- Implementation
  - Connection to GenFit (help from Haiwang)
  - Handling B-field
    - looks working with reversed field  
(but failed with a negative field in PHG4HoughTransform)
  - Looking at detailed tunes (parameters/thresholds)
- Performance test
  - Vertex (Multiple vertices) reconstruction with PYTHIA events
  - Handling outlying tracks
  - Secondary vertex reconstruction (B-tagging efficiency & fake rates)
